Getting Started With AWS

Setting up an AWS account takes about 10–15 minutes. You'll need to provide contact and payment info, verify your identity, and choose a support plan. Account activation may take a few minutes to an hour. Once active, you can access the AWS console

As a beginner in cloud, I plan to start with basic AWS networking projects like setting up a VPC, creating subnets, configuring route tables, setting up security groups, and launching EC2 instances to understand core networking concepts.
